DETAILED ACTION

Examiner acknowledges receipt of amendment and remarks filed 09/16/2005. Claims 51-62, 77-84, 89 and 90 are pending.

Claim Rejections - 35 USC § 102

1. Claims 51-55 remain rejected under 35 U.S.C. 102(b) as being anticipated by Thompson (US 5,531,735).

Applicants argue that the hydroxyl carboxylic acid is used to prepare the porous matrix in the invention while in the prior art Thompson, the hydroxy carboxylic acid acts to initiate decomposition of the matrix polymer when contacted therewith and that in Thompson, the matrix polymers are "either porous materials or relatively non-porous materials," which shows clear difference between the Thompson art and the claimed invention.

2. Applicants' arguments filed 09/16/05 have been fully considered but they are not persuasive.

Claim 51 is a composition claim that is produced by ... and product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps.

[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). Thus as acknowledged by applicants, the prior art discloses the presence of an acid in the composition. Regarding the porous nature or non-porous nature of the

Art Unit: 1618

polymer matrix, it is noted that "relatively non-porous" is non-porous and language of the prior art is "either"/"or." Therefore, the claims read on Thompson.

3. Claims 77-93 remain rejected under 35 U.S.C. 102(b) as being anticipated by Li (US 6,090,996).

Applicants argue that Li does not describe chitosan matrix and that in the claims, chitosan is not present in minor amounts.

4. Applicants' arguments filed 09/16/05 have been fully considered but they are not persuasive.

The matrix of Li contains chitosan. The claims do not recite any amount of chitosan in the matrix. It is respectfully noted that the chitosan matrix comprises chitosan and an acid.

Claim Rejections - 35 USC § 103

5. Claims 51-62, 77-84, 89 and 90 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Bakker et al. (US 5,508,036).

Applicants argue that the first and second layers in Li do not contain chitosan and that Li mentions chitosan as an adhesive material that is capable of forming an adherence layer; that Bakker does not provide indication that application and non-application, "respectively, of freeze-drying may determine whether a porous or non-porous material is obtained" and that one of ordinary skill in the art may not have had the motivation to prepare chitosan matrices. Applicants thus conclude that Bakker does not render obvious the claims.

Application/Control Number: 10/678,751 Page 4

Art Unit: 1618

6. Applicants' arguments filed 09/16/05 have been fully considered but they are not persuasive.

Regarding the presence of chitosan in the matrix if Bakker, it is respectfully noted that the second layer of Bakker contains or is made from one or adhesives such as chitosan (column 12, line 49) and further, Bakker specifically clearly discloses that "in one embodiment, the first and second layers are formed from a polymer" and there is thus the suggestion that both the first and second layers may be formed from the same polymer. The claims are directed to compositions. The layers of Bakker are porous and non-porous and how the porosity is generated provides no patentable distinction of the claimed porous structure/material over the disclosed porous material of the prior art. Bakker renders the claims obvious.

No claim is allowed.

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
